You have worked hard on your project, and we want you to be able to put your best foot forward for the judges. These details will help you show your work off to its fullest and allow the judges to expedite their response to you.

Your final submission is due 11/1 at 11:59PM CT. It needs to be submitted via the website for consideration by the judges. For optimal competitiveness the final submission should include:

- Video
    - ~5 minutes
    - Showcasing your project
    - Demonstrate the solution operating on the hardware in the CSI.
    - Identify the specific problem being solved and why it matters.
    - Explain how the solution would impact other manufacturers and/or generalize more broadly (scrap, rework, downtime, labor, and/or other)
    - Show measured results against a baseline and be clear about where the solution might fall short
- Executive summary
    - 1 page
    - Short summary of your project goals, data collected/generated, and approach
    - Answers the following questions
        - What problem(s) are you solving in manufacturing?
        - How does your project use Physical AI?
        - How did you use the physical equipment in the CSI?
        - What evidence did you collect that demonstrates that your problem is solving the stated problem?
    - Include links to additional reference material to support claims from video or executive summary (GitHub, etc).

Judges will review your submissions and will make invitations to teams to either present at the poster session or oral presentations at the finals. Teams will be asked to accept the invitation by 11/4.

The finals will be held on 11/5 from 4:30-8pm at MSOE in Diercks Hall. The schedule is as follows:

- 4 PM- Poster teams set up- DH Atrium
- 4:30 PM- Final oral presentations will begin- DH Auditorium
- 6:15 PM- Oral presentations conclude- DH Auditorium
- 6:30 PM- Poster presentations & networking begin- DH Atrium
- 8 PM- Evening concludes

Judges will select awardees from both the oral and poster presentations.

Judges include

- Dr. Tomasz Kornuta
- Poonam Chitale
- Rockwell representatives
- Joe Hamann
- Dr. Chris GauthierDickey

Judging criteria will include but will not be limited to:

- Alignment with a grounded manufacturing problem
- Effectiveness and validation of the solution
- Physical operation and reliability
- Engineering practicality
- Value to the manufacturing industry and generalizability of the solution
- Broader impacts
